JANUARY 1992

1991 Highlights

- During 1991, 54 wells were drilled in Manitoba, a 32% decrease from 1990's total of 79 wells.
- Manitoba's annual oil production was down approximately 3% from 1990 production to 712 792 m^3.
- The value of oil produced was approximately $90.3 million, a 21% decrease from 1990.
- Provincial revenues from the oil industry (royalties, oil taxes, lease sales and lease rentals) were $9.3 million during 1991, representing a 15% decline from 1990 ($11.0 million).
- Gross royalties payable to freehold mineral owners were estimated to be $9.9 million in 1991 (Federal and Provincial tax liabilities included).
- Surface rights owners received approximately $3.3 million from rental payments during 1991.
- Municipal tax assessments on oilfield equipment and pipelines were estimated to be $50.7 million (with taxes paid amounting to approximately $2.4 million).
- Oil industry expenditures in Manitoba were estimated to be $69 million in 1991, a 9% decrease from 1990.
- Two geophysical programs were licensed in 1991, covering 15 kilometres at a cost of $62,032.
- Two sales of Crown oil leases covering 1 920 hectares generated $130,275 in revenue to the province in 1991, down 24% from the 1990 total of $172,291.
- As of January 5, 1992 there were 11 oil fields and 118 non-confidential oil pools designated in the province.
- Crude oil prices fluctuated throughout the year between $17 - 24/bbl. In 1991, Manitoba's average crude oil price was $20.15/bbl, compared with 1990's average of $24.78/bbl.
- Manitoba's first horizontal well was drilled in the Daly Field in June 1991.
- Manitoba Energy and Mines announced a new drilling incentive program. All wells drilled from 1992 to the end of 1996 earn holiday oil volumes which are free of Crown royalites or production taxes. In addition, the horizontal drilling incentive program that was introduced in the fall of 1990 has been extended to cover horizontal drilling completed by the end of 1992.
  The program includes a special incentive (holiday oil volume of 50 000 cubic metres) for the first well to produce in each of several currently nonproductive formations.
- The Government of Manitoba also announced the Mineral Exploration Incentive Program (MEIP). The program provides cash grants of up to 25% of the cost of qualifying exploratory expenditures.

Crown Oil and Natural Gas Lease Sales

Two Crown oil and natural gas lease sales were held in 1991. Twenty-four leases covering 1 920 hectares were sold for a total of $130,274.68 up 12% from 1990 lease revenue total of $116,650.

In the first lease sale, held on May 8, 1991, the average lease bonus price paid per hectare was $52.67, whereas in the November 6, 1991 sale, the average lease bonus price increased by 32% to $77.61 per hectare. Compared with the two sales held in 1990, the average lease bonus price in 1991 decreased by 14%, from $75.22 to $64.73/hectare.

No exploration reservations were sold in 1991.

Since Crown oil and gas lease sales resumed in 1979, the province has received $15,808,418 in revenue from the disposition of Crown oil leases and exploration reservations (refer to table for annual sale statistics).

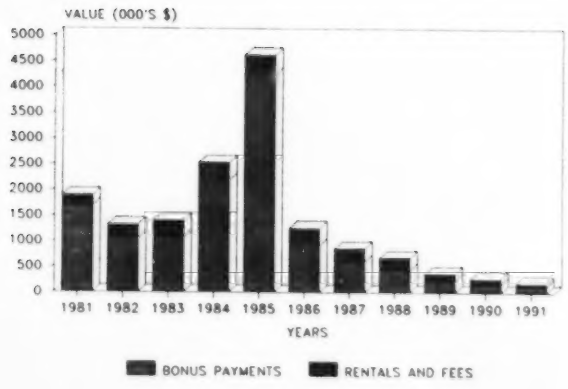
Crown Oil and Natural Gas Leases

As of December 31, 1991, the total area of Crown oil and natural gas rights under disposition was 25 795 hectares. Of this total, 21 667 hectares were held under lease and 4 128 hectares were held under exploration reservations. In 1991 the total area under disposition decreased by 14% compared with 1990.

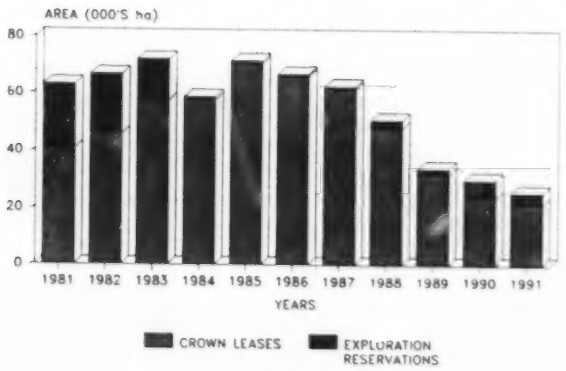
On December 31, 1982, deeper rights renewal provisions came into effect for pre-1979 leases. Under these provisions, non-productive areas and rights below the producing formation revert to the Crown at the end of the lease term. These cancelled rights again become available for leasing by other parties interested in actively developing them.

Oil and natural gas leases have initial terms of five years. Because twelve years have passed since lease sales were resumed in 1979, 1991 was the eighth year that post-1978 lease holders had to surrender non-productive leases or apply for one-year extensions by paying additional rental penalties and committing to drilling programs. As a result, those leases surrendered will again be made available to other interested parties.

CROWN LEASE SALES
1981-1991



CROWN OIL AND GAS RIGHTS
UNDER DISPOSITION (DEC. 31ST) 1981-1991



Freehold Mineral Owner's Leasing and Revenue

Approximately 80% of the mineral rights in southwestern Manitoba are privately owned (freehold). There is keen competition among companies to negotiate new leases with freehold mineral owners in areas of current interest where leases have expired or where mineral rights are not presently leased. Freehold mineral owners receive revenue from signing bonuses, delay rental payments and oil royalties when production is obtained. Freehold royalties may range from 12 1/2 to 20% of gross production sales value. It is estimated that gross royalties payable to freehold mineral owners in 1991 were $9.9 million (not including signing bonuses and delay rental payments for new and non-producing leases and before payment of provincial and federal taxes).

Geophysical Activity

Two geophysical licenses were issued in 1991. The licensed programs covered 14 km. The estimated cost of these programs was $62,032.

This expenditure level is 48% lower than 1990.

The two programs were carried out in the Waskada and Daly areas.

Manitoba Geophysical Activity Summary 1975-1991

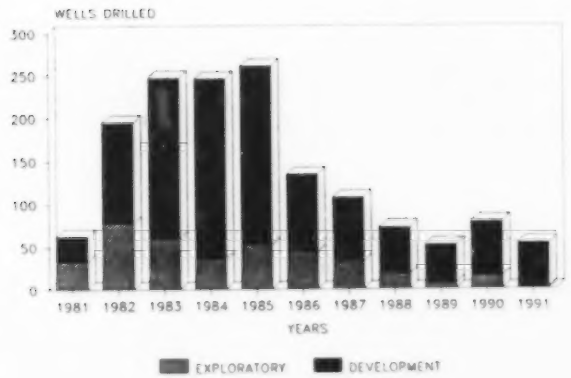
304	Rideau Petroleum Ltd.	Pioneer Exploration Ltd.	8.2
		Total	**13.6**

Drilling Activity

Drilling activity in Manitoba was down over 1990. In 1991, 51 drilling licenses were issued, resulting in 5 different companies drilling 54 wells (32% lower than 1990). Three drilling contractors drilled 48 698 metres of hole for an average well depth of 902 m. Of the 54 wells drilled, 53 were classified as development wells and one was an exploratory well.

The success rate of wells drilled continued to be high. Eighty-nine percent of the 54 wells drilled were completed as potential oil wells. Eighty-nine per cent of the 53 development wells and the only exploratory well drilled were completed as potential oil wells.

WELLS DRILLED IN MANITOBA 1981-1991



Areas of Activity

Waskada

The Waskada Field continued to be the most active area in the province with 19 wells being drilled. Development drilling in the east and north-central parts of the field and a four well reduced spacing project in Waskada Unit No. 4 proceeded.

Daly

Development drilling to the Bakken in the north-west part of the field and a reduced spacing project in Daly Unit No. 3 resulted in 14 wells being drilled in the Daly Field. The province's first horizontal well was drilled in the Daly Field in June 1991.

Pierson

Development drilling continued in the Pierson Field with 14 wells being drilled.

Virden

Seven reduced spacing wells were drilled in Virden Roselea Unit No. 1 in the Virden Field in 1991.

Notes:

(1) Wells classified as capable of oil production at year end that produced oil in 1991. Dual completions or commingled wells count as one well.

(2) Includes Water Injection, Salt Water Disposal, Water Supply, Gas Injection and Other Wells.

Production and Markets

Annual oil production in Manitoba was down 3% from 1990 to 712 792 m^3 (4.5 million barrels). During December 1991, there were 1 408 producing wells.

Oil production from the Virden, Waskada and Daly Fields accounted for 40%, 26% and 19% respectively of Manitoba's total production. The only field to show an increase in production over 1990 was the Pierson Field (increased 12 425 m^3 or 19.8%). All other fields showed production declines (ranging from 2.4% in Daly to 24.4% in Regent).

Of the total amount of oil purchased by refiners, approximately 55% was refined in Ontario and 45% went to refineries in the United States. No Manitoba production was refined in Quebec.

* Includes some oil produced in Saskatchewan and transported into Manitoba.

** Manitoba's last refinery (Shell St. Boniface) closed in 1983.

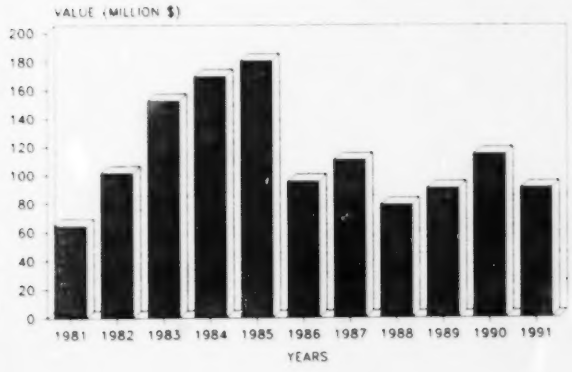
Oil Prices

Manitoba's overall average crude oil selling price in 1991 decreased 19% from 1990 to $126.74/m^3 ($20.15 Cdn. per barrel). The average monthly price was lowest in March at $108.21/m^3 ($17.20 Cdn. per barrel) and highest in January at $147.13/m^3 ($23.39 Cdn. per barrel).

Value of Production

The total value of oil production during 1991 was $90.3 million, down 21% from 1990. Reduced production and lower oil prices in 1991 contributed to the decrease in value of production compared to 1990.

VALUE OF OIL PRODUCTION IN MANITOBA 1981-1991



Provincial Revenue from Oil Production

Lower crude oil prices combined with a decrease in production resulted in a decrease in direct government revenues. During 1991, the Manitoba government collected approximately $9.3 million in revenues ($2.6 million in Crown oil royalties, $6.4 million in freehold oil taxes, and $0.3 million in Crown lease sale bonuses, rentals and fees), resulting in a 15% decrease from 1990. These figures do not include provincial revenues in the form of corporate capital tax, sales tax, municipal tax and corporate and individual income tax.

* Does not include corporate capital tax, sales tax, corporate and individual income tax or oil export tax. All figures are based on calendar year receipts.

Municipal Taxes

Oil producers in Manitoba pay a municipal tax on production facilities, including: oil wells, batteries, salt water disposal wells, salt water disposal plants, water injection wells, suspended wells and pipelines.

The portioned municipal tax assessment on these facilities for the calendar year 1991 was approximately $50.7 million dollars.

Actual tax revenue from these assessments should amount to approximately $2.4 million for affected municipalities.

Surface Owners

Prior to drilling a well, an oil company is required to negotiate a surface lease, which provides right of entry, with the landowner. The normal surface lease includes a first-year bonus payment and a subsequent annual rental fee for the duration of the lease.

Where the landowner is renting his land to another party, the oil company seeking right-of-entry must obtain the consent of both the landowner and the occupant.

After a lease has been signed, the landowner and occupant then determine what share of the compensation paid by the oil company each well receives.

An estimated $3.3 million was paid by oil companies to landowners in the form of first-year bonuses ($0.3 million) and annual rental fees ($3.0 million).

Since proclamation of The Surface Rights Act in 1984, disputes relating to right-of-entry or compensation are referred to the Surface Rights Board. The Board's principal function is to arbitrate disputes between the petroleum industry and landowners regarding use of land for exploration, development and related operations and to determine what compensation should be paid to the landowner.

The Minister of Rural Development is responsible for the administration of The Surface Rights Act. The Board's office is located in Winnipeg.

Spills and Reclamation

Accidental spills of oil and salt water occasionally result from oil industry operations. Regulations require soil damaged by oil and salt water spills to be fully reclaimed by the responsible operator. Sites used for wells or other production facilities must also be fully reclaimed when the well or facility is abandoned.

In 1991, 65 spills involving a total volume of 464.9 m^3 occurred. The volume of fluid spilled is equal to 0.006 percent of the total volume of oil and salt water produced.

Reclamation activities by industry resulted in 46 spill sites and 18 abandoned wellsites achieving full reclamation in 1991. In addition, 228 spill sites and 93 abandoned wellsites require further reclamation. The total area requiring further reclamation is estimated at 23 hectares (57 acres).

Waskada Gas Plant

During 1991 the Waskada gas plant, now in its eighth year of production, processed 10 219.0 10^3m^3 of raw gas or approximately 33% of capacity (capacity = 85 10^3m^3/day). This resulted in the recovery of 5 787.2 m^3 of propane, butane and condensate, valued at approximately $315,000. Compared with 1990, volumes in 1991 decreased by 33%. Of the total 5 787.2 m^3 produced, propane accounted for 53%, butane 22% and condensate 25%.

Manitoba Drilling Incentive Programs (1979 - 1986)

The original "Manitoba Drilling Incentive Program" provided for reduced Crown oil royalty and freehold oil tax rates on oil produced from new wells drilled between January 1, 1979 and January 1, 1987. Wells producing from Crown mineral rights qualified for a special reduced royalty incentive rate which was 35% of the base royalty rate charged on "old oil".

Manitoba Drilling Incentive Programs

(cont'd)

New wells producing from freehold mineral rights were eligible for a corresponding incentive freehold oil tax rate under The Oil and Natural Gas Tax Act.

The reduced royalty and tax rates were applied to production from a new oil well during its respective "incentive period".

A total of 964 wells received an incentive period under this program.

(1987 - 1991)

The second "Manitoba Drilling Incentive Program" provided a royalty/tax free "holiday volume" for new wells drilled between January 1, 1987 and January 1, 1992.

The amount of "holiday volume" varied in response to oil prices and was dependent on the well's location, depth, producing formation and qualifying credits from previous dry holes.

Each new oil well could earn a "holiday volume" of oil up to a maximum of 10 000 m^3 or 5 years of production, whichever occurs first.

Effective August, 1990, the program was amended to include horizontal wells and drains. A horizontal well was eligible to receive a "holiday volume" of 7 500 m^3 or the volume calculated for a vertical well under the program, whichever was greater. Similarily horizontal drains received a "holiday volume" of 1 500 m^3 per drain to a maximum of four drains per well.

A total of 292 vertical wells and one horizontal well received a "holiday volume" under this program.

Enhanced Oil Recovery Incentive Program (1987 -1991)

An Enhanced Oil Recovery Incentive Program was established in 1987. The program worked in the following manner: wells in new or enlarged enhanced oil recovery projects, approved after January 1, 1987, and fully implemented prior to January 1, 1992, were eligible for an incentive period of up to 60 months. During this time, operators benefit from reduced Crown royalty and tax rates on production from the projects.

Ten enhanced oil recovery projects involving 135 tracts have received incentive periods under the program.

New Manitoba Drilling Incentive Program (1992 - 1996)

In October, 1991 the new Manitoba Drilling Incentive Program was announced. The program continues to offer eligible wells a royalty/tax free "holiday volume".

Highlights of the program include:

- a special new formation incentive of 50 000 m^3 for each well that is the first to produce from deeper nonproductive formations.
- greater benefit for exploratory wells drilled into existing producing formations.
- flexibility in the allocation of earned "holiday volumes".
- extension of the horizontal well/drain incentive to the end of 1992.

Detailed information on the program is available from the Petroleum Branch.

Oil Reserves

Established oil reserve additions are directly related to drilling activity. During the 1970's drilling activity was limited and annual reserve additions did not keep pace with production. As a result, remaining established reserves declined.

The extensive driling activity in the early 1980's resulted in increases in remaining established reserves, particularly in the Waskada and Daly Fields. With the collapse of oil prices in 1986, development drilling activity dropped and the annual decline in remaining reserves resumed.

In 1991, successful development drilling and infill projects resulted in 515 000 m^3 of additions to established reserves. As of December 31, 1991, the province's total remaining established oil reserves are estimated at 7.21 million cubic metres (45.4 million barrels) down 2.7% from 1990.

Petroleum Industry Employment

Direct employment in the petroleum industry during 1991 was approximately 250 person years, about the same level as 1990. Of this total, approximately 10 percent is attributed to geophysical and drilling activity, while the remaining 90 percent is associated ongoing operation and maintenance of existing facilities.

In addition, there are indirect jobs created as a result of petroleum industry activity. For every direct job in the petroleum industry it is estimated that 1 to 1.5 indirect jobs are created. This results in another 250-375 person years of indirect employment.

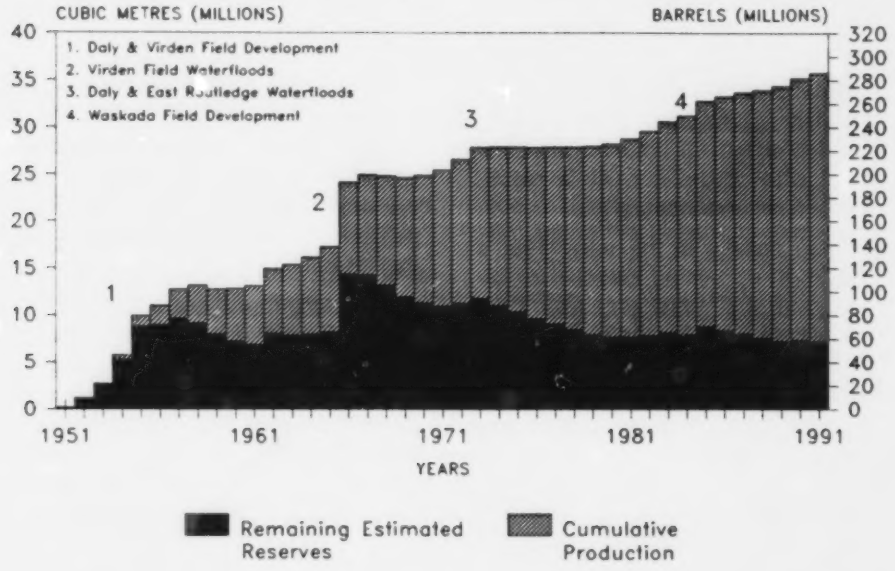
MANITOBA TOTAL ESTABLISHED OIL RESERVES (HISTORY) 1951-1991

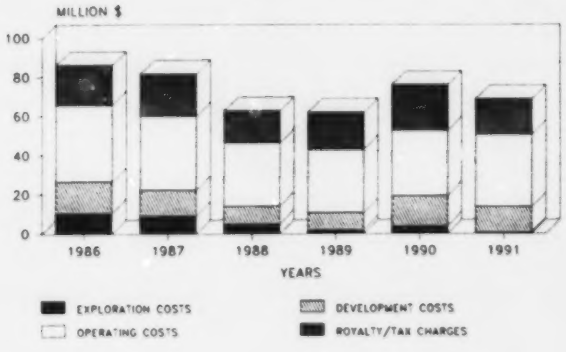


Industry Expenditures

As a result of lower oil prices and reduced levels of oil patch activity in Manitoba during 1991, it is estimated that industry spent $69 million in the province compared with $76 million in 1990. The total expenditures can be broken down into eight categories: exploration, development, land, producing facilities, producing costs, royalties, abandonment and reclamation, and other costs.

- The exploration component, which includes, exploratory drilling costs, geophysical and geological work, amounted to approximately $0.5 million.
- Development costs include development drilling costs, which accounted for approximately $13.0 million.
- Land costs were based on freehold and Crown mineral and surface rights acquisition costs, fees and rentals. The total estimated cost of this component amounted to $3.8 million.
- Producing facilities included mainly capital costs associated with field equipment and enhanced recovery schemes. Approximately $3.1 million were spent on this component.
- Production costs were estimated at $27.4 million and include well operating, flow line and gas plant costs.
- Royalties including freehold production royalties, Crown production royalties and freehold oil taxes, are estimated at appoximately $18.2 million.
- Costs associated with abandonment of wells and reclamation of sites damaged by oil field operations totalled approximaely $0.4 million.
- Other costs in total industry expenditure include municipal taxes, right-of-way acquisitions and miscellaneous expenditures, totalling approximately $2.4 million.

PETROLEUM INDUSTRY EXPENDITURES IN MANITOBA 1981-1991



1992 Forecast

Petroleum exploration activity in Manitoba is expected to increase in 1992 in response to the new Petroleum Drilling Incentive Program and the Manitoba Exploration Incentive Program.

Crown land sales are expected to generate $0.2 - $0.4 million compared with the 1991 figure of $0.13 million.

It is anticipated that three to five geophysical programs will be conducted in 1992.

In the first quarter of 1992, drilling activity has been very low. It is anticipated that development drilling, particularly in the Pierson and Waskada Fields will continue at a relatively low level in 1992. It is anticipated that there may be a significant amount of exploratory drilling later in the year.

It is estimated that 40 to 50 wells will be drilled in 1992.

It is anticipated that at least one horizontal well will be drilled in Manitoba in 1992. Application of this technology is stimulated by ongoing success of horizontal wells in southeastern Saskatchewan and by Manitoba's horizontal well incentive program.

It is anticipated that a pilot pressure maintenance scheme may be initiated in the Pierson Field in 1992.

Based on the anticipated level of drilling and pressure maintenance activity, crude oil production is expected to decline by about 5% to 677 000 m^3 compared with 712 792 m^3 in 1991.

Crude oil prices in Manitoba are expected to fluctuate in the range of $100/$m^3$ to $140/$m^3$ ($15.90 Cdn. per barrel to $22.25 Cdn. per barrel) and average approximately $120/$m^3$ ($19.05 Cdn. per barrel) down slightly from $126.74/$m^3$ ($20.15 Cdn. per barrel) in 1991.

The total value of oil production is forecast to be approximately $81 million.

Direct royalty/tax revenues to the Crown are expected to total approximately $7.4 million ($2.0 million in Crown royalties and $5.4 million in freehold production taxes).
